

Definition 0.1 (σ -algebra): Let E be a set and $\mathcal{E}$ a family of subset of E . Then, $\mathcal{E}$ is a σ -algebra (resp. an algebra) if,

- $E \in \mathcal{E}$
- $\mathcal{E}$ is stable w.r.t. set complementation
- $\mathcal{E}$ is stable w.r.t. countable (resp. finite) unions.
